

# Advanced NXT-G Programming

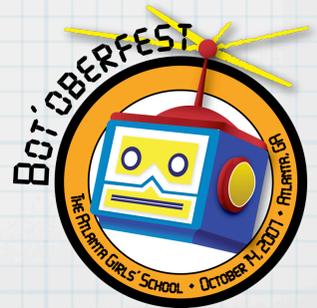

---

John Field  
Former Software Group Manager  
for MINDSTORMS® NXT

# Agenda

- \* Benefits of MINDSTORMS Software v1.1
- \* Complete Palette Overview
- \* Datahubs and Wiring
- \* Decision Making using Logic and Compare
- \* Variables
- \* Q & A

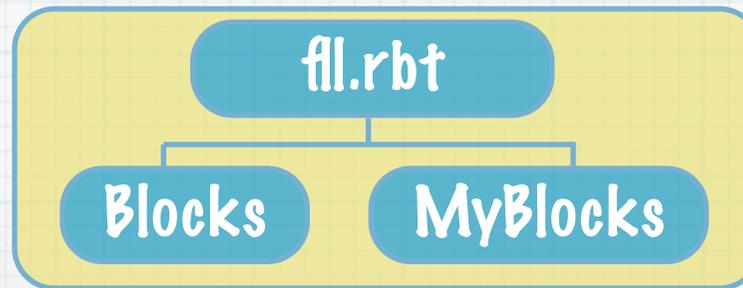

# Benefits of v1.1

- \* Vista & Intel-based Mac support
- \* Improved Performance on all OSes
- \* Smaller Compiled Files (.rxn) on the NXT
- \* Large Programs are easier to build
- \* Lots of small features & bugs fixed

# PC Software Stack

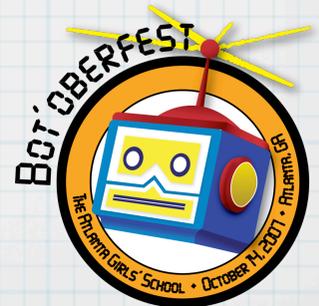

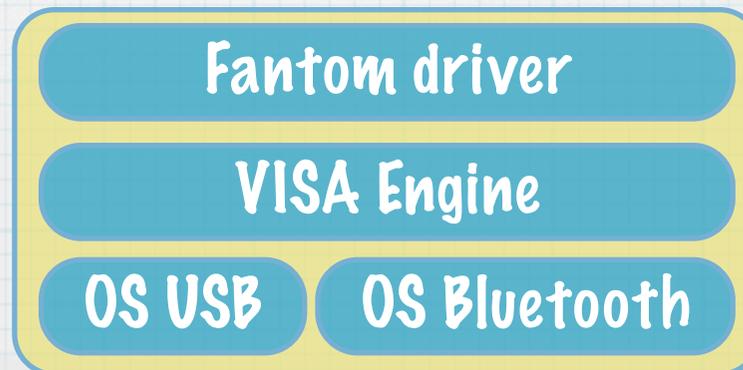

Programs

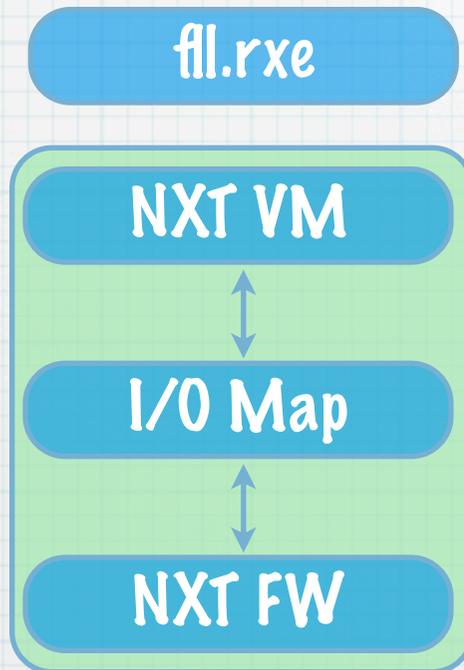

MINDSTORMS.exe

Fantom.dll

# NXT Software Stack

- \* rxe files are the executable version of the rbt
- \* NXT VM - Runs programs (now execute this block...)
- \* NXT FW - Handles low level details (such as reading a sensor or handling Bluetooth)
- \* I/O Map - Interface between them

# NXT Execution Flow

- \* Read sensor values and place in I/O Map
- \* Hand control over to the VM
- \* VM executes part of the rxe file
  - \* May read sensor values from I/O map
  - \* May update I/O map to tell motors to run
- \* Motors look at the I/O map to determine what to do
- \* Repeat

# Complete Palette

\* Common

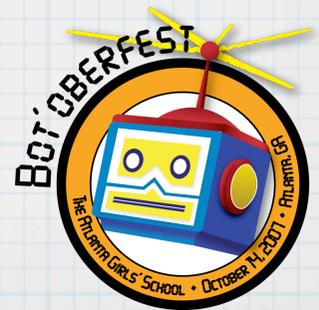

\* Action

\* Sensor

\* Flow

\* Data

\* Advanced

# Common

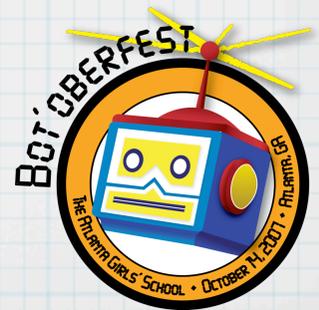

- \* Move
- \* Rec/Play
- \* Sound
- \* Display
- \* Wait
- \* Loop
- \* Switch

# Move

- \* Good for multiple motor operations.
- \* NXT FW synchronizes the motors
- \* Less susceptible to battery levels with turns

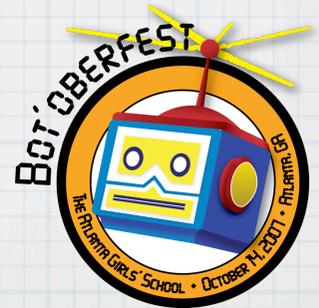

## Action

- \* Motor
- \* Sound
- \* Display
- \* Send Message
- \* Motor\*
- \* Lamp\*

# Motor

- \* Good for single motor operations.
- \* Allows for fine grain control
  - \* Ramping
  - \* Motor Power
- \* When should I use move with 1 motor?

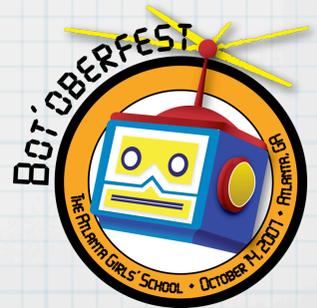

## Sensor

- \* Touch
- \* Sound
- \* Light
- \* Ultrasonic
- \* NXT Buttons
- \* Rotation
- \* Timer
- \* Receive Message
- \* Touch\*
- \* Rotation\*
- \* Light\*
- \* Temperature\*

## Data

- \* Logic
- \* Math
- \* Compare
- \* In Range
- \* Random
- \* Variable

# Datahubs and Wires

## \* 4 Data Wires

— Number

— Logic

— Text

..... Broken

## \* 2 Types of Hubs

 Input/Pass-through

 Output Only

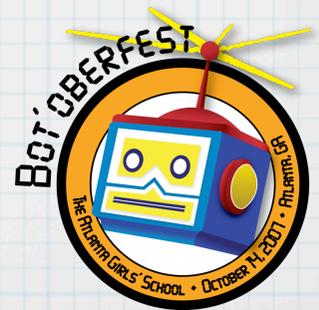

# Wiring

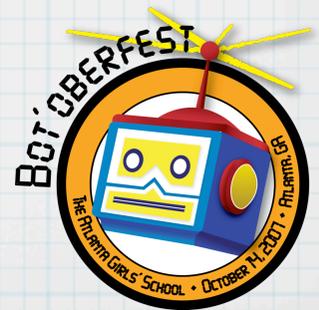

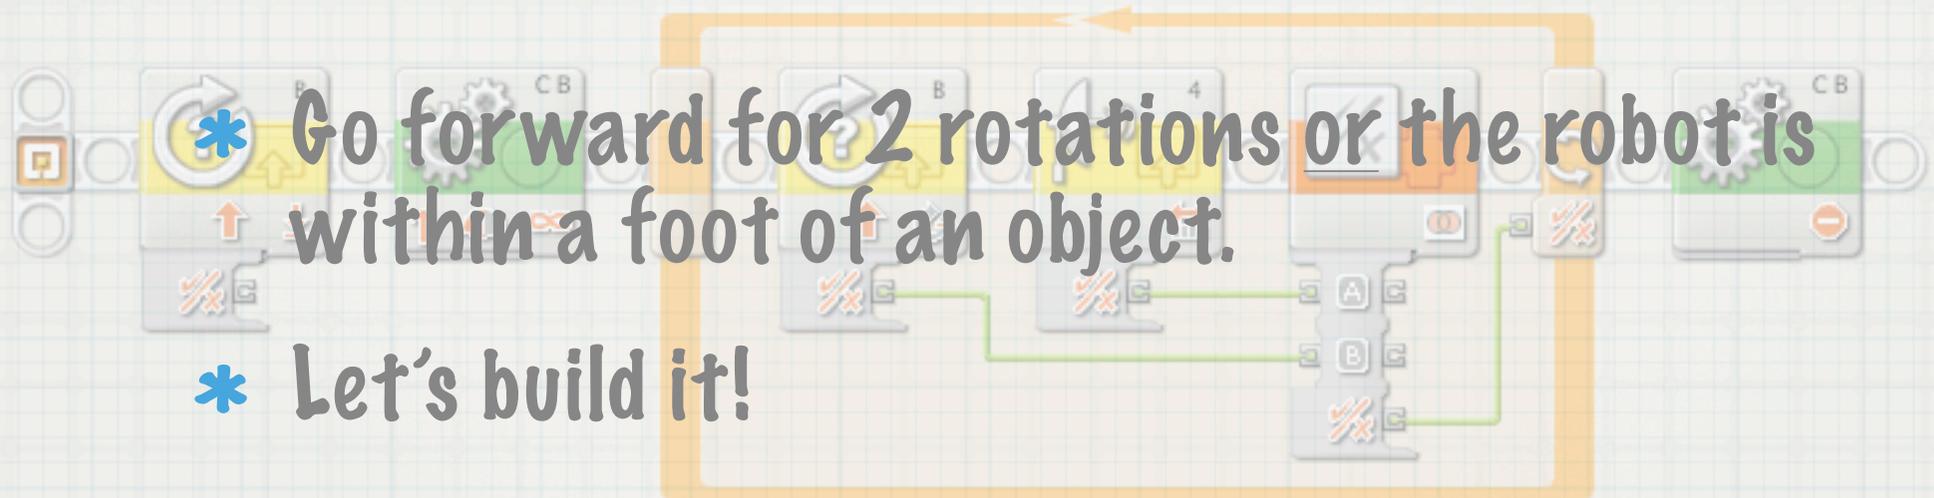

- \* You can move wires, but they don't look selected.
- \* Undo is your friend.
- \* To find and fix all broken wires
  - \* Go to [forums.nxtasy.org](http://forums.nxtasy.org)
  - \* Search for "broken wire"

**Warning:**  
You are getting to the edge of the software. The editor isn't always cooperative.

<http://forums.nxtasy.org/index.php?showtopic=444&hl=broken%20wires&st=0>

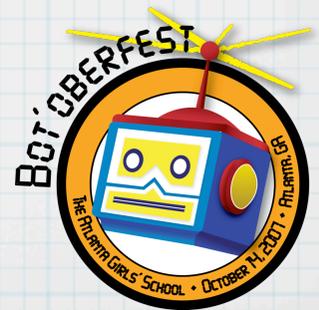

# Decision using Logic

# Decision using Switch

Print "above" to the display if either the sound or light sensor exceeds 50. Otherwise, print "below".

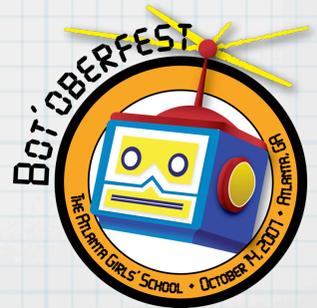

Let's take a look.

# Complex Decision

- \* If the light sensor intensity is between
  - \* 0-25: play a low tone
  - \* 26-75: play a middle tone
  - \* 76-100: play a high tone
- \* Also, output the region to the display

Let's take a look at this program.

# Variables

- \* Create in each program & My Block that needs access
- \* Good for
  - \* Counting
  - \* Saving Rotations
  - \* Passing data to one or more MyBlocks

Edit: Define Variables...

Edit Variables

Create, delete, or change variables:

List:

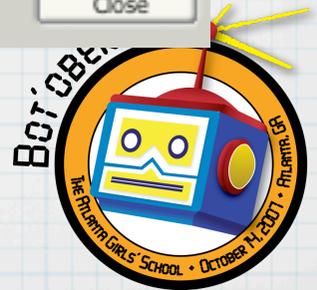

Name	Type
Logic 1	Logic
Number 1	Number
Text 1	Text
Rotations	Number

Create Delete

Name: Rotations

Datatype: Number

Close

# Count Claps

# Store Rotations

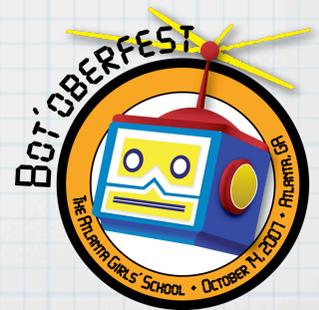

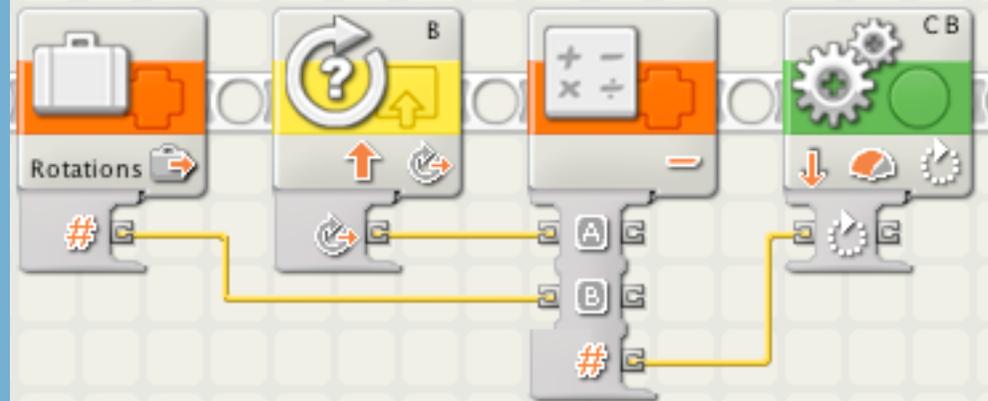

Initialize the variable to the current degrees

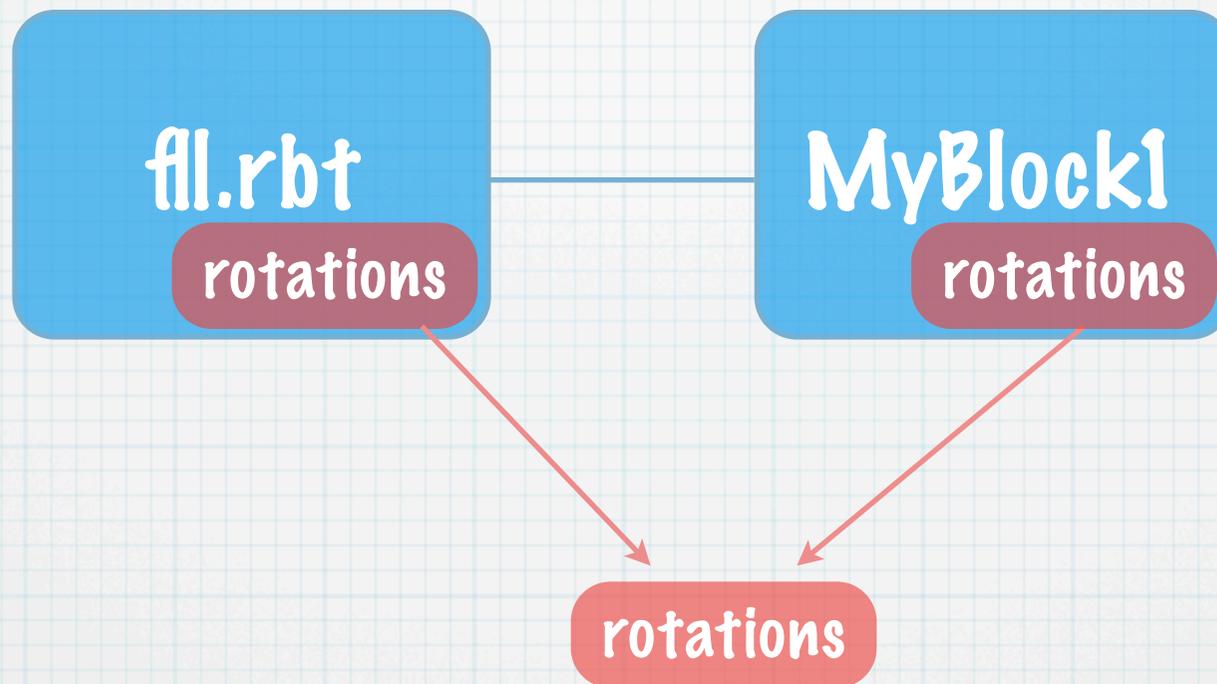

Move a random number of seconds

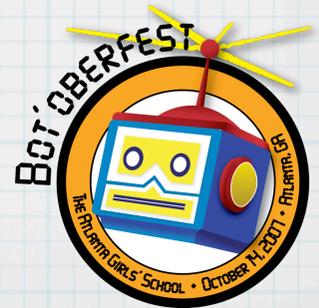

Move back to your starting point

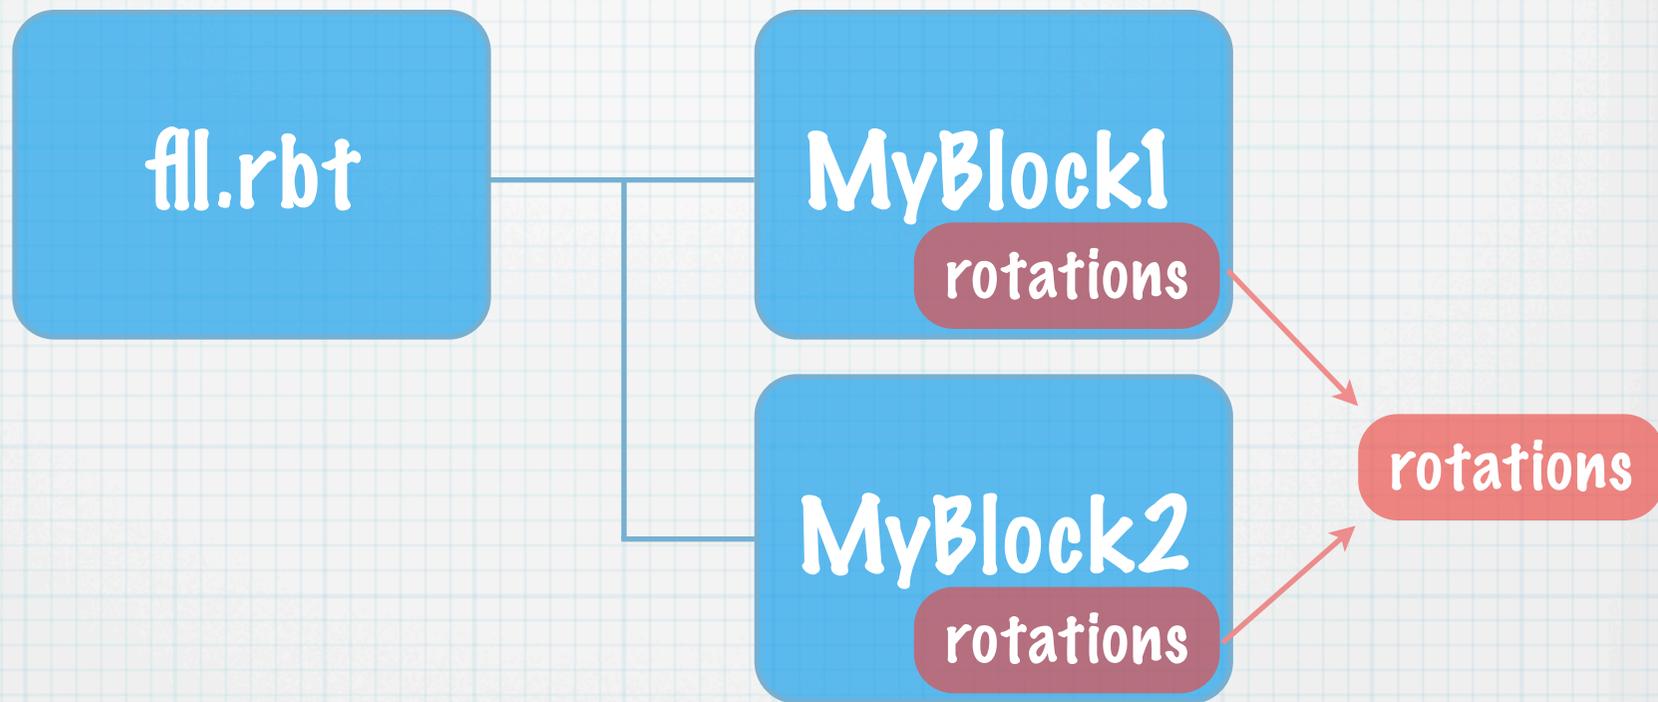

# Variable Scope

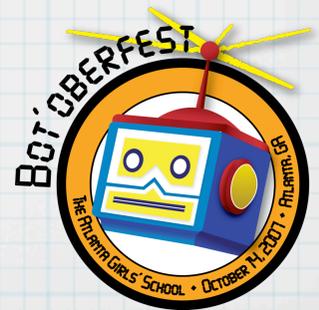

Variables with the same name are shared globally when a program is running

# Variable Scope

To avoid problems like this, use  
MyBlock1\_rotations & MyBlock2\_rotations

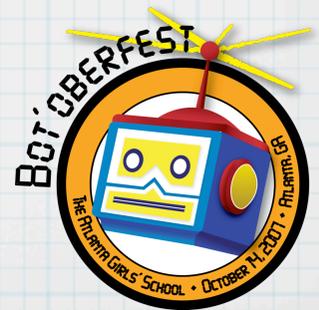

## Advanced

- \* Text
- \* Number to Text
- \* Keep Alive
- \* File Access
- \* Calibrate
- \* Reset Motor

Great Debugging Tools

# Without Reset Motors

Duration:  Degrees

Next Action:  Brake  Coast

Duration:  Degrees

Next Action:  Brake  Coast
